

In every household there are a variety of materials and substances which can be damaging to the Environment if not disposed of correctly. Although these Household Hazardous Waste Materials make up only 1% of all household waste, proper disposal is essential.

Household Hazardous Waste

There are fourteen locations throughout Counties Clare, Limerick and Kerry which accept household hazardous waste for correct treatment and disposal. Currently this waste is taken to Germany and/or Holland for disposal in a waste to energy thermal plant. At present this is the only safe way to dispose of such material. Because of their hazardous nature it is not possible to recycle these materials, with the exception of batteries, engine oil, and fluorescent tubes.

What items make up Household Hazardous Waste?

OIL BASED PAINTS/THINNERS

AEROSOLS

CLEANING AGENTS/BLEACHES

WASTE ENGINE OIL

WEED KILLERS AND OTHER PESTICIDES

ALL TYPES OF BATTERIES

FLUORESCENT LIGHT TUBES

As Household Hazardous Waste is problematic, we encourage householders to seek out more environmentally friendly products and where these are not available, purchase the listed products in minimal sizes and use sparingly. Please do not dispose of any Household Hazardous Waste in your Wheelie Bin or at Landfill Sites. Please ensure that all Household Hazardous Waste is presented for disposal in its original container

Please see our list of sites overleaf for the disposal of the above hazardous materials.
